

Glass Manufacturing

Below you can see how well AM301 reduced processing oils from a glass manufacturing plant.

These samples were incubated at room temperature for 72 hours. The samples are from left to right: Control, 2.5 mLs AM-301, 5 mLs AM-301, 10 mLs AM-301. All samples except the control have 2.5 mLs of supplemental nutrients.

Initial inoculation and setup

Oil reduction achieved after 48 hours of incubation. Notice the progressively better water clarity as the microbial population increases.
